

Petwise Scan API

Scan service for pet-food photos and pet photos. Not a full pet-app backend (no login, pet CRUD, or reminders).

Base URL <https://petwise.apptechcode.com>

Swagger <https://petwise.apptechcode.com/docs>

Auth

Send this header on every scan request.

x-api-key	API key for the app. Missing or wrong !' 401.
------------------	---

Request format

Method	POST for scans
Body	multipart/form-data
Image field	image
Types	jpg, png, webp
Max size	10 MB

POST /api/v1/scan/food

Food, bag, can, or kibble. Rated for this pet (species + allergies), not as generic food.

image	Required. Food / packet photo.
outputLanguage	Optional. Default English. Example: Urdu.
petName	Optional. Name from the pet profile, e.g. Milo.
species	Optional. dog cat other unknown.
allergies	Optional. What the pet cannot eat. One string: chicken, beef. Omit if none.

species and allergies exist because the photo shows the label, not the pet. Chicken on the bag + allergies=chicken !' warning / caution.

POST /api/v1/scan/pet

Pet photo. Visible wellness only — not a diagnosis.

image	Required. Pet photo.
outputLanguage	Optional. Default English.
petName / species / allergies	Optional. Used if the photo is actually food.

GET /api/v1/scan/jobs/{jobId}

If POST returns 202, the scan is queued. Poll with the same x-api-key.

Success (200)

```
{ "data": { "type": "food"|"pet", "analysis": {} }, "success": true }
```

If the user hits the food URL with a pet photo (or the reverse), type still matches the photo.

Food analysis fields

productName	Name or description of the food.
recipe	Flavour / recipe line if visible.
brand	Brand, or Unknown.
safety	safe caution unsafe toxic for this pet.
choiceLabel	Good Choice Use Caution Not Recommended Unsafe.
